

Appendix A: Table of Contents for Volume I of the Technical Report

FOREWORD

ACKNOWLEDGMENTS

1. THIRD INTERNATIONAL MATHEMATICS AND SCIENCE STUDY: AN OVERVIEW

Michael O. Martin

- 1.1 *INTRODUCTION*
- 1.2 *THE CONCEPTUAL FRAMEWORK FOR TIMSS*
- 1.3 *THE TIMSS CURRICULUM FRAMEWORKS*
- 1.4 *THE TIMSS CURRICULUM ANALYSIS*
- 1.5 *THE STUDENT POPULATIONS*
- 1.6 *SURVEY ADMINISTRATION DATES*
- 1.7 *THE TIMSS ACHIEVEMENT TESTS*
- 1.8 *PERFORMANCE ASSESSMENT*
- 1.9 *THE CONTEXT QUESTIONNAIRES*
- 1.10 *MANAGEMENT AND OPERATIONS*
- 1.11 *SUMMARY OF THE REPORT*
- 1.12 *SUMMARY*

2. DEVELOPMENT OF THE TIMSS ACHIEVEMENT TESTS

Robert A. Garden and Graham Orpwood

- 2.1 *OVERVIEW*
- 2.2 *ITEM TYPES*
- 2.3 *DEVELOPING THE ITEM POOLS*
- 2.4 *TEST BLUEPRINT FINALIZATION*
- 2.5 *THE FIELD TRIAL*
- 2.6 *PREPARATION FOR THE MAIN SURVEY*
- 2.7 *CALCULATORS AND MEASURING INSTRUMENTS*

3. THE TIMSS TEST DESIGN

Raymond J. Adams and Eugenio J. Gonzalez

- 3.1 *OVERVIEW*
- 3.2 *CONSTRAINTS OF THE TIMSS TEST DESIGN*
- 3.3 *A CLUSTER-BASED DESIGN*
- 3.4 *TIMSS POPULATION 1 TEST DESIGN*
- 3.5 *TIMSS POPULATION 2 TEST DESIGN*
- 3.6 *TIMSS POPULATION 3 TEST DESIGN*

4. SAMPLE DESIGN

Pierre Foy, Keith Rust, and Andreas Schleicher

- 4.1 OVERVIEW
- 4.2 TARGET POPULATIONS AND EXCLUSIONS
- 4.3 SAMPLE DESIGN
- 4.4 FIRST SAMPLING STAGE
- 4.5 SECOND SAMPLING STAGE
- 4.6 OPTIONAL THIRD SAMPLING STAGE
- 4.7 RESPONSE RATES

5. DEVELOPMENT OF THE TIMSS CONTEXT QUESTIONNAIRES

William H. Schmidt and Leland S. Cogan

- 5.1 OVERVIEW
- 5.2 INITIAL CONCEPTUAL MODELS AND PROCESSES
- 5.3 EDUCATIONAL OPPORTUNITY AS AN UNDERLYING THEME
- 5.4 INSTRUMENTATION REVIEW AND REVISION
- 5.5 THE FINAL INSTRUMENTS

6. DEVELOPMENT AND DESIGN OF THE TIMSS PERFORMANCE ASSESSMENT

Maryellen Harmon and Dana L. Kelly

- 6.1 OVERVIEW
- 6.2 CONSIDERATIONS FOR THE DESIGN
- 6.3 TASK DEVELOPMENT
- 6.4 PERFORMANCE ASSESSMENT DESIGN
- 6.5 ADMINISTRATION PROCEDURES
- 6.6 CONCLUSION

7. SCORING TECHNIQUES AND CRITERIA

Svein Lie, Alan Taylor, and Maryellen Harmon

- 7.1 OVERVIEW
- 7.2 DEVELOPMENT OF THE TIMSS CODING SYSTEM
- 7.3 DEVELOPMENT OF THE CODING RUBRICS FOR FREE-RESPONSE ITEMS
- 7.4 DEVELOPMENT OF THE CODING RUBRICS FOR THE PERFORMANCE ASSESSMENT TASKS
- 7.5 THE NATURE OF FREE-RESPONSE ITEM CODING RUBRICS
- 7.6 SUMMARY

8. TRANSLATION AND CULTURAL ADAPTATION OF THE SURVEY INSTRUMENTS

Beverley Maxwell

- 8.1 OVERVIEW
- 8.2 TRANSLATING THE TIMSS ACHIEVEMENT TESTS
- 8.3 TRANSLATION PROCEDURES AT THE NATIONAL CENTERS
- 8.4 VERIFYING THE TRANSLATIONS

9. FIELD OPERATIONS

Andreas Schleicher and Maria Teresa Siniscalco

- 9.1 OVERVIEW
- 9.2 DOCUMENTATION
- 9.3 SELECTING THE SCHOOL SAMPLE
- 9.4 IMPLICATIONS OF THE TIMSS DESIGN FOR WITHIN-SCHOOL FIELD OPERATIONS
- 9.5 WITHIN-SCHOOL SAMPLING PROCEDURES FOR POPULATIONS 1 AND 2
- 9.6 THE GENERAL PROCEDURE FOR WITHIN-SCHOOL SAMPLING
- 9.7 PROCEDURE A FOR WITHIN-SCHOOL SAMPLING
- 9.8 PROCEDURE B FOR WITHIN-SCHOOL SAMPLING
- 9.9 EXCLUDING STUDENTS FROM TESTING
- 9.10 CLASS, STUDENT, AND TEACHER ID AND TEACHER LINK NUMBER
- 9.11 WITHIN-SCHOOL SAMPLING PROCEDURES FOR POPULATION 3
- 9.12 RESPONSIBILITIES OF SCHOOL COORDINATORS AND TEST ADMINISTRATORS
- 9.13 PACKAGING AND SENDING MATERIALS
- 9.14 CODING, DATA ENTRY, DATA VERIFICATION, AND SUBMISSION OF DATA FILES AND MATERIALS
- 9.15 CODING THE FREE-RESPONSE ITEMS
- 9.16 DATA ENTRY
- 9.17 CONCLUSION

10. TRAINING SESSIONS FOR FREE-RESPONSE SCORING AND ADMINISTRATION OF PERFORMANCE ASSESSMENT

Ina V.S. Mullis, Chancey Jones, and Robert A. Garden

- 10.1 OVERVIEW
- 10.2 THE TIMSS FREE-RESPONSE CODING TRAINING TEAM
- 10.3 THE SCHEDULE OF THE REGIONAL TRAINING SESSIONS
- 10.4 DESCRIPTION OF EACH TRAINING SESSION
- 10.5 THE TRAINING MATERIALS
- 10.6 CONCLUDING REMARKS

11. QUALITY ASSURANCE PROCEDURES

Michael O. Martin, Ina V.S. Mullis, and Dana L. Kelly

- 11.1 OVERVIEW
- 11.2 STANDARDIZATION OF THE TIMSS PROCEDURES
- 11.3 PROCEDURES FOR TRANSLATION AND ASSEMBLY OF THE ASSESSMENT INSTRUMENTS
- 11.4 SCORING THE OPEN-ENDED RESPONSES
- 11.5 NATIONAL QUALITY CONTROL PROGRAM
- 11.6 TIMSS QUALITY CONTROL MONITORS
- 11.7 THE QUALITY CONTROL MONITOR'S VISIT TO THE SCHOOLS

| APPENDIX A: | ACKNOWLEDGMENTS |
| APPENDIX B: | TIMSS TEST BLUEPRINTS |
| APPENDIX C: | TIMSS SURVEY OPERATIONS FORMS |

Appendix B: Characteristics of the National Samples

In Chapter 2, the TIMSS target populations were described and the participation rates and sample sizes were documented for Populations 1 and 2. This appendix describes, for each country and each population in which it participated, the target population definitions, coverage and exclusions, use of stratification variables, and any deviations from the general TIMSS design.

AUSTRALIA

Target Population

Table B.1 identifies the defined target grades by state for Population 1 and Population 2 in Australia. The target grades in the two populations varied by state. This variation is due to different age entrance rules applied in the Australian States and Territories. Allowing these state variations maximized coverage of the age-13 cohort.

Table B.1 Target Grades in Australia

| State or Territory | Population 1 | Population 2 |
|------------------------------|--------------|--------------|
| New South Wales | 3 and 4 | 7 and 8 |
| Victoria | 3 and 4 | 7 and 8 |
| Queensland | 4 and 5 | 8 and 9 |
| South Australia | 4 and 5 | 8 and 9 |
| Western Australia | 4 and 5 | 8 and 9 |
| Tasmania | 3 and 4 | 7 and 8 |
| Northern Territory | 4 and 5 | 8 and 9 |
| Australian Capital Territory | 3 and 4 | 7 and 8 |

Coverage and Exclusions

School-level exclusions in Population 1 consisted of extremely small schools, distance-education schools, and Victorian schools involved in another study. School-level exclusions in Population 2 consisted of extremely small schools and distance-education schools.

Sample Design - Population 1

- Explicit stratification by eight states and territories and three types of school (government, Catholic, and independent), for a total of 24 strata
- No implicit stratification

- Schools sorted on the sampling frame by geography
- Sample allocation of schools as presented in Table B.2
- Additional schools sampled after a first selection (these schools were included in the TIMSS sample for Population 1)
- School participation adjustments for weighting computed only at the state and territory level because the type-of-school level of stratification became too fine
- Sampled two upper-grade classrooms per school
- Sampled one lower-grade classroom per school except in Queensland, South Australia, Western Australia, and the Northern Territory, where two classrooms per school were sampled

Table B.2 Allocation of School Sample in Australia

| State or Territory | Population 1 Schools | Population 2 Schools |
|------------------------------|----------------------|----------------------|
| New South Wales | 40 | 40 |
| Victoria | 40 | 40 |
| Queensland | 40 | 40 |
| Western Australia | 40 | 35 |
| South Australia | 40 | 35 |
| Tasmania | 30 | 12 |
| Northern Territory | 20 | 8 |
| Australian Capital Territory | 18 | 4 |
| All Australia | 268 | 214 |

Sample Design - Population 2

- Explicit stratification by eight states and territories and three types of school (government, Catholic, and independent), for a total of 24 strata
- No implicit stratification
- Schools sorted on the sampling frame by geography
- Sample allocation of schools as presented in Table B.2
- Additional schools sampled after a first selection (these schools could not be included in the TIMSS sample for Population 2 because of time constraints; students from those schools were not assigned any sampling weights)

- School participation adjustments for weighting computed only at the state and territory level because the type-of-school level of stratification became too fine
- Sampled two upper-grade classrooms per school
- Sampled one lower grade classroom per school, except in Queensland, South Australia, Western Australia and the Northern Territory, where two classrooms per school were sampled

AUSTRIA

Coverage and Exclusions

School-level exclusions in both populations consisted of schools labeled “Sonderschulen.”

Sample Design - Population 1

- Explicit stratification by three levels of urbanization (Vienna, urban, and rural)
- Sampled 150 schools, 50 per explicit stratum
- Schools sorted on the sampling frame by geography
- Sampled one classroom per grade per school

Sample Design - Population 2

- Explicit stratification by two school types and three levels of urbanization, for a total of six strata (see Table B.3)
- Sampled 159 schools, based on the allocation presented in Table B.3
- Schools sorted on the sampling frame by geography
- Sampled one classroom per grade per school
- Sampled science classrooms in Population 2, rather than mathematics classrooms as in other countries, because streaming in mathematics classes would have resulted in the inclusion of an inordinate number of science teachers in the data collection

Table B.3 Allocation of School Sample in Austria - Population 2

| Explicit Stratum | | Number of Schools |
|--------------------------------|--------------------------------------|-------------------|
| School Type | Urbanization (Number of Inhabitants) | |
| Hauptschulen (HS) | Up to 5,000 | 33 |
| | From 5,001 to 1,000,000 | 33 |
| | More than 1,000,000 (Vienna) | 33 |
| AHS-Unterstufe (Lower Step) | Up to 5,000 | 10 |
| | From 5,001 to 1,000,000 | 25 |
| | More than 1,000,000 (Vienna) | 25 |
| All Austria | | 159 |

BELGIUM (FLEMISH)**Coverage and Exclusions**

School-level exclusions consisted mostly of lower-grade students in a track labeled 1B. These students had encountered failure in primary schooling and had been moved to the secondary system because of age. Since their curriculum was largely a review of primary education, the Flemish part of Belgium chose to exclude them. Small schools and schools with only vocational programs also were excluded.

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by three types of school (state, local board, and Catholic) and two programs (schools with or without the technical program), for a total of six strata
- Sampled 150 schools to contribute a classroom from each grade in the general program
- Subsampled 15 schools among the 79 sampled schools with the technical program, to contribute a classroom from the technical program

BELGIUM (FRENCH)**Coverage and Exclusions**

School-level exclusions consisted mostly of lower-grade students in a track labeled 1B. These students had failures in primary schooling and had been moved to the secondary system because of age. Since their curriculum was largely a review of primary education, the French part of Belgium chose to exclude them. Small schools and schools with only vocational programs also were excluded.

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by three types of school (state, local board, and Catholic) and two programs (schools with or without the technical program), for a total of six strata
- Sampled 150 schools to contribute a classroom from each grade in the general program
- Subsampled 35 schools among the 70 sampled schools with the technical program, to contribute a classroom from the technical program

BULGARIA**Coverage and Exclusions**

School-level exclusions consisted of schools for the disabled, sport schools, and art schools.

Sample Design - Population 2

- Explicit stratification by two types of schools (schools with both grades and schools with only the upper grade)
- Implicit stratification by three levels of urbanization (national capital, urban, and rural) and three levels of school size (since no valid measure of size was available)
- Sampled 150 schools with both grades and 17 schools with only the upper grade, for a total sample of 167 schools
- Sampled one classroom per grade per school

CANADA**Coverage and Exclusions**

School-level exclusions consisted of offshore schools, schools where students are taught in their aboriginal language, very small schools, schools in Prince Edward Island, and French schools in New Brunswick.

Sample Design - Population 1 and Population 2

- Explicit stratification by province or territory, language (in Ontario), and three types of school (Population 1 only, Population 2 only, Population 1 and Population 2), for a total of 39 strata over both populations (see Table B.4)
- Type-of-school stratification allowing maximum overlap of sampled schools between Population 1 and Population 2
- No implicit stratification

- Sample allocation of schools as presented in Table B.4
- A total of 428 schools sampled for Population 1 and 429 sampled for Population 2
- The 40 Population 1 and Population 2 schools sampled in Alberta divided equally between populations since that province wanted to reduce the school participation burden
- The 14 Population 1 and Population 2 schools in British Columbia more finely stratified because of odd combinations of target grades present in those schools
- Sampled one classroom per grade per school
- Sampled two upper-grade classrooms per school in Ontario

Table B.4 Allocation of School Sample in Canada

| Province or Territory | Population 1 Only Schools | Populations 1 and 2 Schools | Population 2 Only Schools |
|-----------------------|---------------------------|-----------------------------|---------------------------|
| Newfoundland | 25 | 15 | 25 |
| Nova Scotia | 3 | 2 | 3 |
| New Brunswick | 12 | 10 | 12 |
| Québec | 35 | 2 | 40 |
| Ontario (French) | 20 | 75 | 6 |
| Ontario (English) | 40 | 80 | 40 |
| Manitoba | 2 | 4 | 2 |
| Saskatchewan | 2 | 4 | 2 |
| Alberta | 35 | 40 | 35 |
| British Columbia | 4 | 10 | 14 |
| Yukon Territory | 2 | 2 | 2 |
| Northwest Territories | 2 | 2 | 2 |
| All Canada | 182 | 246 | 183 |

COLOMBIA

Coverage and Exclusions

School-level exclusions consisted of schools located in remote areas.

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by five regions, two types of school (public and private), and four types of schedule (morning, afternoon, evening, and all day), for a total of 48 strata

- The fifth region further stratified by calendar since it is split between a Northern Hemisphere calendar and a Southern Hemisphere calendar (hence, 48 implicit strata)
- Sampled 150 schools
- Sampled one classroom per grade per school
- Subsampled 20 students per sampled classroom; classrooms sampled with PPS

CYPRUS

Coverage and Exclusions

School-level exclusions in Population 1 consisted of single-classroom schools. There were no school-level exclusions in Population 2.

Sample Design - Population 1

- No explicit stratification
- Implicit stratification by four regions and two levels of urbanization (urban and rural), for a total of eight strata
- Sampled 150 schools
- 74 schools were sampled with certainty because of their large size
- Sampled one classroom per grade per school

Sample Design - Population 2

- All 55 Population 2 schools included in TIMSS
- Sampled two classrooms per grade per school

CZECH REPUBLIC

Coverage and Exclusions

School-level exclusions consisted of schools for the disabled.

Sample Design - Population 1

- No explicit stratification
- Implicit stratification by four levels of urbanization and two types of school
- Sampled 150 schools
- Pseudo-schools constructed in Population 1
- Sampled one classroom per grade per school

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by four levels of urbanization, two types of school, and two levels of school stream
- Sampled 150 schools
- Sampled one classroom per grade per school

DENMARK

Coverage and Exclusions

There were no school-level exclusions in Denmark.

Sample Design - Population 2

- Explicit stratification by two geographical levels (Copenhagen and the rest)
- No implicit stratification
- Schools sampled using a stratified simple random sample design
- Sampled 24 schools from Copenhagen and 134 from the rest of the country
- Sampled one classroom per grade per school
- Classrooms sampled by the school headmasters
- Grade 8 classrooms also sampled for national purposes
- A national test booklet added to the booklet rotation; students assigned the TIMSS booklets were considered a random subsample within classrooms

ENGLAND

Coverage and Exclusions

School-level exclusions consisted of special-needs schools, very small schools, and schools that were selected for their national evaluation samples. The last category accounts for the relatively high exclusion rates in both populations.

Sample Design - Population 1

- No explicit stratification
- Implicit stratification by three regions, two types of school, and two levels of urbanization
- Sampled 150 schools

- Sampled one classroom per grade per school
- Two classrooms sampled in single-grade schools

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by three regions, two types of school, and two levels of urbanization
- Sampled 150 schools
- Students sampled across classrooms within grades in sampled schools, resulting in 16 students randomly sampled per grade per school
- 32 students randomly sampled in single-grade schools

FRANCE

Coverage and Exclusions

School-level exclusions consisted of schools in a track labeled CPPN, as well as schools in their offshore territories (*territoires outre-mer*).

The target grades are *5ième générale (5g)*, *4ième générale (4g)*, and *4ième technologique (4t)*. Not all schools offer the 4t program, and this was accounted for in explicit stratification for sampling purposes.

Sample Design - Population 2

- Sampled three independent samples: *collèges*, *collèges with 4t*, *lycées professionnels*
- Overlap in the sampling frames for the first two samples, the second sampling frame being a subset of the first
- Explicit stratification by two levels of urbanization (rural and urban) and two types of school (public and private), for a total of four strata
- No implicit stratification
- Sample allocation of schools as presented in Table B.5
- Schools sampled using a Lahiri method of PPS selection
- All schools in the first sample contributing one 5g classroom; only 136 of them contributing a 4g classroom via a random drop method
- All seven schools in the second sample contributing one 5g classroom and one 4t classroom
- All eight schools in the third sample contributing a single 4t classroom, since these schools do not have the *général* track

- Overlap in the first two sampling frames, causing all *collèges* with 4t classrooms to have two chances of being sampled and contributing a 5g classroom; their school selection probabilities computed accordingly

Table B.5 Allocation of School Sample in France - Population 2

| Sampling Frame | Sampled Schools | Sampled Classrooms | | |
|-----------------------|-----------------|--------------------|-----|----|
| | | 5g | 4g | 4t |
| All collèges | 144 | 144 | 136 | 0 |
| Collèges with 4t | 7 | 7 | 0 | 7 |
| Lycées Professionnels | 8 | 0 | 0 | 8 |
| All France | 159 | 151 | 136 | 15 |

GERMANY

Coverage and Exclusions

One region, Baden-Württemberg, did not participate in TIMSS, thereby reducing national coverage of the target population.

School-level exclusions in Germany consisted of:

- Non-graded private schools
- Special schools for the disabled
- Schools in small strata where no schools were actually sampled
 - Realschulen in Brandenburg
 - Integrierte Gesamtschules and Integrierte Klassen in Hauptund Realschulen in Mecklenburg-Vorpommern and Niedersachsen
 - Integrierte Gesamtschulen in Rheinland-Pfalz and Saarland
- Schools in strata where none of the sampled schools participated
 - Realschulen in Berlin
 - Hauptschulen and Integrierte Gesamtschulen in Schleswig-Holstein

Sample Design - Population 2

- Explicit stratification by 14 regions and 5 types of school, for a total of 45 strata (Table B.6)
- No schools sampled in some of the explicit strata because they were small (see exclusions above)

Table B.6 Allocation of School Sample in Germany - Population 2

| Region | Type of School | | | | | Total |
|------------------------|----------------|-------------|-----------|---------------------------|---|-------|
| | Hauptschulen | Realschulen | Gymnasien | Integrierte Gesamtschulen | Integrierte Klasse Haupt- und Realschulen | |
| Bayern | 11 | 8 | 8 | 1 | --- | 28 |
| Berlin | 1 | 1 | 2 | 2 | --- | 6 |
| Brandenburg | --- | 0 | 2 | 4 | --- | 6 |
| Bremen-Hamburg | 2 | 2 | 1 | 1 | --- | 6 |
| Hessen | 2 | 3 | 4 | 3 | --- | 12 |
| Mecklenburg-Vorpommern | 2 | 4 | 4 | 0 | 0 | 10 |
| Niedersachsen | 5 | 5 | 3 | 0 | 0 | 13 |
| Nordrhein-Westfalen | 12 | 7 | 9 | 3 | --- | 31 |
| Rheinland-Pfalz | 4 | 2 | 2 | 0 | --- | 8 |
| Saarland | 1 | 1 | 1 | 0 | --- | 3 |
| Sachsen | --- | --- | 4 | --- | 7 | 11 |
| Sachsen-Anhalt | --- | --- | 1 | --- | 5 | 6 |
| Schleswig-Holstein | 2 | 2 | 2 | 1 | --- | 7 |
| Thuringen | 2 | --- | 2 | 2 | --- | 6 |
| All Germany | 44 | 35 | 45 | 17 | 12 | 153 |

- No implicit stratification
- Sample allocation of schools as presented in Table B.6
- Sampled one classroom per grade per school
- Upper-grade classrooms sampled with PPS and lower grade classrooms sampled with equal probabilities within schools
- Explicit strata considered as implicit in the construction of replicate strata for the jackknife estimation method, since there were an inordinate number of strata

GREECE

Coverage and Exclusions

School-level exclusions in Population 1 and Population 2 consisted of special schools where a different curriculum is used. Evening schools were also excluded in Population 2.

Sample Design - Population 1

- Explicit stratification by 11 regions
- No implicit stratification
- Proportional allocation of 187 schools to the 11 explicit strata

- Sampled one classroom per grade per school
- Computed an overall school participation adjustment for weighting, thereby ignoring the relatively fine explicit stratification

Sample Design - Population 2

- Explicit stratification by 11 regions
- No implicit stratification
- Proportional allocation of 180 schools to the 11 explicit strata
- Sampled one classroom per grade per school
- Always sampled the first classroom listed in the school administrative records from each grade
- Computed an overall school participation adjustment for weighting, thereby ignoring the relatively fine explicit stratification

HONG KONG

Coverage and Exclusions

School-level exclusions consisted of “international” schools that follow overseas curricula.

Sample Design - Population 1

- Explicit stratification by two levels of gender (co-educational and single-sex) and three levels of school administration (aided, government, and private), for a total of five strata (single-sex government schools do not exist)
- No implicit stratification
- A proportional allocation of 156 schools to the five explicit strata
- Eight of the sampled schools no longer in operation
- Sampled one classroom per grade per school
- Computed an overall school participation adjustment for weighting, thereby ignoring the relatively fine explicit stratification

Sample Design - Population 2

- Explicit stratification by two levels of gender (co-educational and single-sex), two levels of language (Chinese and English), and three levels of school administration (aided, government, and private) for a total of 10 strata (single-sex/Chinese/ government and single-sex/Chinese/private schools do not exist)
- No implicit stratification

- A proportional allocation of 105 schools to the 10 explicit strata
- One sampled school no longer in operation
- Sampled one classroom per grade per school
- Computed an overall school participation adjustment for weighting, thereby ignoring the relatively fine explicit stratification

HUNGARY

Coverage and Exclusions

School-level exclusions consisted of very small schools.

Sample Design - Population 1 and Population 2

- No explicit stratification
- Implicit stratification by three levels of urbanization (national capital, urban, and rural)
- Sampled 150 schools, to be used for both populations
- Sampled one classroom per grade per school
- Grade 8 classrooms sampled with PPS, using class size as the measure of size; grades 3, 4, and 7 classrooms sampled using the grade 8 selection probabilities
- Whenever the grade 8 selection probabilities were inappropriate for the other grades, assumed selection with equal probabilities for those grades; this was not a significant issue for grade 7, but did become an issue for grades 3 and 4

ICELAND

Coverage and Exclusions

School-level exclusions consisted of very small schools.

Sample Design - Population 1 and Population 2

- All eligible schools are included in TIMSS
- Sampled one classroom per grade per school

IRAN, ISLAMIC REPUBLIC OF

Coverage and Exclusions

School-level exclusions consisted of schools for the physically and mentally disabled.

Sample Design - Population 1

- Six regions as explicit strata
- Three implicit strata: rural schools, urban girls' schools, and urban boys' schools
- Sampled 180 schools, 30 per region
- Sampled one classroom per grade per school
- Subsampled 20 students per sampled classroom; classrooms sampled with PPS

Sample Design - Population 2

- Six regions as explicit strata
- Four implicit strata: rural girls' schools, rural boys' schools, urban girls' schools, and urban boys' schools
- Sampled 192 schools in Population 2, 32 per region
- Sampled one classroom per grade per school
- Subsampled 20 students per sampled classroom; classrooms were sampled with PPS

IRELAND

Coverage and Exclusions

School-level exclusions in Population 1 consisted of private schools, schools for the physically and mentally disabled, and very small schools. There are no school-level exclusions in Population 2.

Sample Design - Population 1

- Two explicit strata based on school size – small/medium schools and large schools
- Three implicit strata based on gender: boys' schools, girls' schools, and co-educational schools
- Sampled 91 small/medium schools and 59 large schools
- Pseudo-schools constructed
- Sampled one classroom per grade per school

Sample Design - Population 2

- No explicit stratification
- Five implicit strata based on gender and type of school: secondary boys' schools, secondary girls' schools, secondary coeducational schools, vocational schools, and community/comprehensive schools
- Sampled 150 schools
- Sampled one classroom per grade per school

ISRAEL**Coverage and Exclusions**

Coverage in Israel is restricted to the Hebrew public education system. This means that the non-Jewish education system and the Jewish Orthodox Independent Education system are not covered. School-level exclusions consisted of special education schools for the physically and mentally disabled. Israel included only the upper grade (eighth grade) in Population 2 and the upper grade (fourth grade) in Population 1.

Sample Design - Population 1

- No explicit stratification
- No implicit stratification
- Sampled 100 schools
- Some sampled schools replacing schools participating in a longitudinal study; these alternate schools are recognized as non-procedural replacement schools
- Sampled one classroom per school
- Alternate classrooms sampled by the local school authorities in 27 of 87 participating schools

Sample Design - Population 2

- No explicit stratification
- Two implicit strata: junior high schools and elementary schools
- Sampled 100 schools
- Sampled one classroom per school
- Alternate classrooms sampled by the local school authorities in 35 of 46 participating schools

JAPAN**Coverage and Exclusions**

School-level exclusions consisted of very small schools and schools for the physically and mentally disabled. Private schools also were excluded in Population 1.

Sample Design - Population 1

- Explicit stratification by three school sizes (small, medium, and large) and three levels of urbanization (rural, urban, and large urban), for a total of nine strata
- No implicit stratification
- Schools sampled using a stratified simple random sample design
- Sampled 150 schools
- Sampled one classroom per grade per school

Sample Design - Population 2

- Explicit stratification by three school sizes (small, medium, and large) and three levels of urbanization (rural, urban, and large urban), for a total of nine strata
- No small/large urban schools, but private schools added as a ninth stratum
- No implicit stratification
- Schools sampled using a stratified simple random sample design
- Sampled 158 schools
- Sampled one classroom per grade per school

KOREA**Coverage and Exclusions**

School-level exclusions consisted of schools in remote places, islands, and border areas. Additional Population 2 school-level exclusions consisted of evening schools and physical education schools.

Sample Design - Population 1

- No explicit stratification
- Implicit stratification by region and urbanization, for a total of 24 strata
- Sampled 150 schools
- Sampled one classroom per grade per school
- Subsampled 20 students per sampled classroom; classrooms sampled with PPS

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by region, urbanization, and type of school (national and private), for a total of 48 strata
- Sampled 150 schools
- Sampled one classroom per grade per school
- Subsampled 20 students per sampled classroom; classrooms sampled with PPS

KUWAIT**Coverage and Exclusions**

There were no exclusions of any kind in Kuwait. Kuwait included only the upper grade (ninth grade) in Population 2 and the upper grade (fifth grade) in Population 1.

Sample Design - Population 1 and Population 2

- All eligible schools included in TIMSS
- Girls' schools and boys' schools
- Sampled one classroom per school
- Classrooms sampled based on the weekly school schedule; i.e., the Monday morning mathematics class was generally sampled

LATVIA**Coverage and Exclusions**

Coverage in Latvia was restricted to students whose language of instruction is Latvian. School-level exclusions consisted of schools for the physically and mentally disabled and very small schools.

Sample Design - Population 1 and Population 2

- No explicit stratification
- Implicit stratification by five regions, two levels of urbanization (rural and urban), and three types of school (beginner, basic, and secondary)
- Sampled 150 schools
- Some schools sampled with certainty
- Pseudo-schools constructed
- Sampled one classroom per grade per school

LITHUANIA**Coverage and Exclusions**

Coverage in Lithuania was restricted to students whose language of instruction is Lithuanian. School-level exclusions consisted of schools with more than one language of instruction, schools for the physically and mentally disabled, and very small schools.

Sample Design - Population 2

- Explicit stratification by three levels of urbanization (big urban, urban, and rural)
- No implicit stratification
- Proportional allocation of 151 schools to the three explicit strata
- Sampled one classroom per grade per school
- Computed an overall school participation adjustment for weighting

NETHERLANDS**Coverage and Exclusions**

School-level exclusions consisted of special education schools for the physically and mentally disabled and very small schools.

Sample Design - Population 1

- No explicit stratification
- Implicit stratification by four levels of denomination, three levels of urbanization, and two levels of socio-economic composition
- Sampled 150 schools
- Pseudo-schools constructed
- Sampled all eligible students in sampled schools
- A national test booklet added to the booklet rotation in the upper grade; students assigned the TIMSS booklets considered a random subsample within classrooms

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by three types of school and two levels of urbanization

- Sampled 150 schools
- Sampled one classroom per grade per school
- A national test booklet added to the booklet rotation in the upper grade; students assigned the TIMSS booklets considered a random subsample within classrooms

NEW ZEALAND

Coverage and Exclusions

School-level exclusions consisted of correspondence schools and very small schools. One geographically remote school was also excluded in Population 1.

Sample Design - Population 1

- No explicit stratification
- Implicit stratification by two levels of community size and three levels of school size
- Sampled 150 schools
- Sampled one classroom per grade per school

Sample Design - Population 2

- Explicit stratification by three types of school (both grades present, only upper grade present, only lower grade present)
- Implicit stratification varying by explicit stratum as described in Table B.7
- The sample allocation of schools as presented in Table B.7
- Sampled one classroom per grade per school

Table B.7 Allocation of School Sample in New Zealand - Population 2

| Explicit Stratum | Sampled Schools | Implicit Stratification |
|-------------------------|------------------------|---|
| Both Grades Present | 23 | Authority (state & private) Community size (2 levels) School gender (co-ed, boys, girls) |
| Upper Grade Only | 127 | – |
| Lower Grade Only | 127 | Authority (state & private) Community size (5 levels) School type (full primary & intermediate) |

NORWAY**Coverage and Exclusions**

School-level exclusions consisted of special schools for the disabled and schools with Sami (Lapp) as the language of instruction. Special schools with an alternative pedagogy were also excluded in Population 1.

Sample Design - Population 1

- Explicit stratification by three school sizes (see Table B.8)
- Implicit stratification by six regions and two levels of urbanization
- Sample allocation of schools as presented in Table B.8
- Sampled one classroom per grade per school

Table B.8 Allocation of School Sample in Norway - Population 1

| Explicit Stratum | Sampled Schools |
|-----------------------------------|-----------------|
| Schools with Small Classrooms | 40 |
| Schools with Mid-Sized Classrooms | 83 |
| Schools with Large Classrooms | 27 |
| All Norway | 150 |

Sample Design - Population 2

- Explicit stratification by five types of school (see Table B.9)
- Implicit stratification by six regions and two levels of urbanization
- Sample allocation of schools as presented in Table B.9
- Sampled one classroom per grade per school

Table B.9 Allocation of School Sample in Norway - Population 2

| Explicit Stratum | | Sampled Schools |
|---------------------|------------------|-----------------|
| Dual-Grade Schools | Small Classrooms | 13 |
| | Large Classrooms | 27 |
| Upper-Grade Schools | | 110 |
| Lower-Grade Schools | Small Classrooms | 91 |
| | Large Classrooms | 19 |
| All Norway | | 260 |

PHILIPPINES

Coverage and Exclusions

Regions 8 and 12 and the Autonomous Region of Muslim Mindanao were removed from their national coverage. School-level exclusions consisted of schools under the responsibility of the Agriculture, Fisheries, and Industrial Arts/Trade ministries. These exclusions affected only the upper grade, which is found in the secondary school system.

Sample Design - Population 2

- Preliminary sampling of 57 school divisions from a frame of 114 school divisions; some school divisions sampled randomly, others based on the advice of the Department of Education, Culture and Sports
- Explicit stratification by school system: elementary schools for the lower grade and secondary schools for the upper grade
- No implicit stratification
- Sampled 200 secondary schools and 200 elementary schools
- Generally, three to five secondary schools sampled per school division
- Elementary schools sampled based on the notion that they are feeder schools for the sampled secondary schools
- Sampled one classroom per grade per school
- Subsampled 32 students per sampled classroom, but classrooms sampled with equal probabilities within schools

Special note: Sampling weights could not be computed for the Philippines. The selection of elementary schools could not be considered random, nor was it possible to derive their selection probabilities.

PORTUGAL

Coverage and Exclusions

School-level exclusions in Population 1 consisted of very small schools. There were no school-level exclusions in Population 2.

Sample Design - Population 1

- Explicit stratification by seven regions
- Implicit stratification by two levels of urbanization (rural and urban) and three levels of socio-economic status
- Sampled 150 schools

- Pseudo-schools constructed
- Sampled one classroom per grade per school

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by five regions, two levels of urbanization (rural and urban), and two levels of type of school (basic and secondary)
- Sampled 150 schools
- Pseudo-schools constructed
- Sampled one classroom per grade per school

ROMANIA

Coverage and Exclusions

School-level exclusions consisted of schools for the disabled, orphanages, schools with only one of the target grades, schools with multigrade classrooms, and very small schools.

Sample Design - Population 2

- No explicit stratification
- No implicit stratification
- Sampled 150 schools
- Pseudo-schools constructed
- Sampled one classroom per grade per school

RUSSIAN FEDERATION

Coverage and Exclusions

School-level exclusions consisted of schools where the language of instruction is other than Russian and schools in regions Nord Osetia and Chechnia.

Sample Design - Population 2

- Preliminary sampling of 40 regions from a frame of 79 regions; ten regions large enough to be sampled with certainty
- No explicit stratification
- Implicit stratification by two levels of urbanization (urban and rural)
- Sampled 175 schools

- Generally, four schools sampled per region; more schools sampled in most certainty regions
- Pseudo-schools constructed
- Sampled one classroom per grade per school

SCOTLAND

Coverage and Exclusions

School-level exclusions consisted of very small schools.

Sample Design - Population 1 and Population 2

- Explicit stratification by two types of school (state and independent)
- No implicit stratification
- Sampled 150 schools
- Pseudo-schools constructed
- Sampled one classroom per grade per school

SINGAPORE

Coverage and Exclusions

There are no school-level exclusions in Population 1. School-level exclusions in Population 2 consisted of newly-opened schools without the upper grade.

Sample Design - Population 1 and Population 2

- All eligible schools included in TIMSS
- Sampled one classroom per grade per school

SLOVAK REPUBLIC

Coverage and Exclusions

School-level exclusions consisted of schools where the language of instruction is other than Slovakian.

Sample Design - Population 2

- No explicit stratification
- Implicit stratification by 4 regions
- Sampled 150 schools
- Sampled one classroom per grade per school

SLOVENIA**Coverage and Exclusions**

School-level exclusions consisted of schools for the disabled and schools where the language of instruction is Italian or Hungarian.

Sample Design - Population 1 and Population 2

- No explicit stratification
- Implicit stratification by four levels of urbanization and two types of school (dislocated or not)
- Sampled 150 schools, to be used for both populations
- Sampled one classroom per grade per school

SOUTH AFRICA**Coverage and Exclusions**

School-level exclusions consisted of very small schools.

Sample Design - Population 2

- Explicit stratification by school system-elementary schools for the lower grade and secondary schools for the upper grade
- Implicit stratification by nine provinces
- Sampled 150 elementary schools and 150 secondary schools
- Some elementary schools with upper-grade classrooms; some secondary schools with lower-grade classrooms
- Sampled one classroom per grade per school
- Not all absent students recorded in the TIMSS database, so student participation rates are overestimated

SPAIN**Coverage and Exclusions**

School-level exclusions consisted of schools where the language of instruction is Euskera, very small schools, and schools in 15 very small explicit strata (see notes below).

Sample Design - Population 2

- Explicit stratification by eight regions, two types of school (public and private), and three levels of school size, for a total of 43 strata
- No schools sampled from 15 of these strata because they were so small (see exclusions above)

- No implicit stratification
- Proportional allocation of 150 schools to the remaining 28 explicit strata
- Pseudo-schools constructed
- Sampled one classroom per grade per school
- Computed an overall school participation adjustment for weighting, thereby ignoring the relatively fine explicit stratification

SWEDEN

Coverage and Exclusions

School-level exclusions consisted of schools for the disabled.

Sample Design - Population 2

- Explicit stratification by school system: elementary schools for the lower grade and secondary schools for the upper grade
- No implicit stratification
- Sampled 160 elementary schools and 120 secondary schools
- Schools sampled using a PPS Lahiri method
- Sampled one classroom per elementary school and two classrooms per secondary school
- Eighth-grade classrooms also sampled for national purposes
- A national test booklet added to the booklet rotation; students assigned the TIMSS booklets considered a random subsample within classrooms

SWITZERLAND

Target Population

The target grades vary in Switzerland. In the German parts, they are 6 and 7. In all other parts of Switzerland, the target grades are 7 and 8.

Coverage and Exclusions

Four cantons – Jura, Waadt, Neuchatel and Freiburg – did not participate, thereby reducing national coverage of the target population. School-level exclusions consisted of schools for the disabled, schools where the language of instruction is not one of the official languages, and very small schools.

Sample Design - Population 2

- Explicit stratification by region, type of school, and track, for a total of 15 strata (see Table B.10)

- No implicit stratification
- Sample allocation of schools as presented in Table B.10
- In each stratum from the canton of Basle, all 16 sampled schools contributing a grade 7 classroom, 8 of them contributing a grade 8 classroom (see note below), and 2 of them contributing a grade 6 classroom
- Additional schools sampled for national purposes; students from such schools were not assigned sampling weights
- Sampled one classroom per grade per school
- Grade 8 classrooms also sampled in the German cantons for national purposes

Table B.10 Allocation of School Sample in Switzerland - Population 1

| Explicit Stratum | Sampled Schools |
|--|-----------------|
| Private schools, with lower grade | 2 |
| Private schools, with upper grade | 2 |
| Private schools, with both grades | 2 |
| Canton of Bern, German part | 30 |
| Canton of Basle, lower track | 16 |
| Canton of Basle, medium track | 16 |
| Canton of Basle, higher track | 16 |
| Other German cantons, with lower grade | 80 |
| Other German cantons, with upper grade | 80 |
| Other German cantons, with both grades | 18 |
| Canton of Bern, French part | 12 |
| Canton of Valais, French part | 10 |
| Geneva | 18 |
| Canton of Grison, Italian part | 2 |
| Canton of Ticino | 37 |
| All Switzerland | 341 |

THAILAND

Coverage and Exclusions

School-level exclusions consisted of special education schools, demonstration schools run by the Department of Teacher Education and the Ministry of University Affairs, and private schools.

Sample Design - Population 1

- Explicit stratification by 13 regions and two levels of urbanization (rural and urban), for a total of 25 strata (Bangkok region is all urban)
- No implicit stratification
- Schools sampled using a stratified simple random sample design
- Proportional allocation of 150 schools to the first 24 explicit strata; five schools sampled from Bangkok
- Sampled one classroom per grade per school
- Always sampled the first classroom listed in the school administrative records from each grade
- Computed an overall school participation adjustment for weighting for the first 24 explicit strata, thereby ignoring the relatively fine explicit stratification

Sample Design - Population 2

- No explicit stratification
- No implicit stratification
- Schools sampled using a simple random sample design
- Sampled 150 schools
- Sampled one classroom per grade per school
- Always sampled the first classroom listed in the school administrative records from each grade

UNITED STATES**Coverage and Exclusions**

School-level exclusions consisted of ungraded schools.

Sample Design - Population 1 and Population 2

- Preliminary sampling of 59 primary sampling units (PSU), from a frame of 1026 PSUs
- Explicit stratification of PSUs, prior to sampling, by four regions: north-east, southeast, midwest, and west
- Eleven PSUs sampled with certainty – essentially large urban centers
- Explicit stratification of schools by type – public and private

- Implicit stratification by two levels of minority status (high and low) and three levels of split grades (lower, upper, and both)
- Increased (i.e., doubled) school selection probabilities in the high minority strata
- Sampled 220 schools
- Sampled one lower-grade classroom and two upper-grade classrooms per school

Appendix C: Design Effects and Effective Sample Size Tables

**Table C.1 Design Effects and Effective Sample Sizes by Grade and Gender
Third Grade - Girls - Mathematics Mean Scale Score - Population 1**

| Country | Sample Size | Mean Mathematics Score | Variance | JRR s.e. | SRS s.e. | Design Effect | Effective Sample Size |
|--------------------|-------------|------------------------|----------|----------|----------|---------------|-----------------------|
| Australia | 2392 | 480 | 7920.6 | 4.5 | 1.8 | 6.12 | 391 |

TIMSS

Acknowledgments

TIMSS was truly a collaborative effort among hundreds of individuals around the world. Staff from the national research centers, the international management, advisors, and funding agencies worked closely to design and implement the most ambitious study of international comparative achievement ever undertaken. TIMSS would not have been possible without the tireless efforts of all involved. Below, the individuals and organizations are acknowledged for their contributions. Given that implementing TIMSS has spanned more than seven years and involved so many people and organizations, this list may not pay heed to all who contributed throughout the life of the project. Any omission is inadvertent. TIMSS also acknowledges the students, teachers, and school principals who contributed their time and effort to the study.

MANAGEMENT AND OPERATIONS

Since 1993, TIMSS has been directed by the International Study Center at Boston College in the United States. Prior to this, the study was coordinated by the International Coordinating Center at the University of British Columbia in Canada. Although the study was directed centrally by the International Study Center and its staff members implemented various parts of TIMSS, important activities also were carried out in centers around the world. The data were processed centrally by the IEA Data Processing Center in Hamburg, Germany. Statistics Canada was responsible for collecting and evaluating the sampling documentation from each country and for calculating the sampling weights. The Australian Council for Educational Research conducted the scaling of the achievement data.

International Study Center (1993-)

Albert E. Beaton, International Study Director
Michael O. Martin, Deputy International Study Director
Ina V.S. Mullis, Co-Deputy International Study Director
Eugenio J. Gonzalez, Director of Operations and Data Analysis
Dana L. Kelly, Research Associate
Teresa A. Smith, Research Associate
Cheryl L. Flaherty, Research Associate
Maryellen Harmon, Performance Assessment Coordinator
Robert Jin, Computer Programmer
Ce Shen, Computer Programmer
William J. Crowley, Fiscal Administrator
Thomas M. Hoffmann, Publications Coordinator
José Rafael Nieto, Senior Production Specialist

Greg Macaskill, Research Officer

IEA Secretariat

Tjeerd Plomp, Chairperson
Hans Wagemaker, Executive Director
Barbara Malak-Minkiewicz, Manager Membership Relations
Leendert Dijkhuizen, Financial Officer
Karin Baddane, Secretary

FUNDING AGENCIES

Funding for the International Study Center was provided by the National Center for Education Statistics of the U.S. Department of Education, the U.S. National Science Foundation, and the International Association for the Evaluation for Educational Achievement. Eugene Owen and Lois Peak of the National Center for Education Statistics and Larry Suter of the National Science Foundation each played a crucial role in making TIMSS possible and for ensuring the quality of the study. Funding for the International Coordinating Center was provided by the Applied Research Branch of the Strategic Policy Group of the Canadian Ministry of Human Resources Development. This initial source of funding was vital in initiating the TIMSS project. Tjeerd Plomp, Chair of the IEA and of the TIMSS Steering Committee, has been a constant source of support throughout TIMSS. It should be noted that each country provided its own funding for the implementation of the study at the national level.

NATIONAL RESEARCH COORDINATORS

The TIMSS National Research Coordinators and their staff had the enormous task of implementing the TIMSS design in their countries. This required obtaining funding for the project; participating in the development of the instruments and procedures; conducting field tests; participating in and conducting training sessions; translating the instruments and procedural manuals into the local language; selecting the sample of schools and students; working with the schools to arrange for the testing; arranging for data collection, coding, and data entry; preparing the data files for submission to the IEA Data Processing Center; contributing to the development of the international reports; and preparing national reports. The way in which the national centers operated and the resources that were available varied considerably across the TIMSS countries. In some countries, the tasks were conducted centrally, while in others, various components were subcontracted to other organizations. In some countries, resources were more than adequate, while in others, the national centers were operating with limited resources. Of course, across the life of the project, some NRCs have changed. This list attempts to include all past NRCs who served for a significant period of time as well as all the present NRCs. All of the TIMSS National Research Coordinators and their staff members are to be commended for their professionalism and their dedication in conducting all aspects of TIMSS.

TIMSS ADVISORY COMMITTEES

The TIMSS International Study Center was supported in its work by several advisory committees. The TIMSS International Steering Committee provided guidance to the International Study Director on policy issues and general direction of the study. The TIMSS Technical Advisory Committee provided guidance on issues related to design, sampling, instrument construction, analysis, and reporting, ensuring that the TIMSS methodologies and procedures were technically sound. The Subject Matter Advisory Committee ensured that current thinking in mathematics and science education were addressed by TIMSS, and was instrumental in the development of the TIMSS tests. The Free-Response Item Coding Committee developed the coding rubrics for the free-response items. The Performance Assessment Committee worked with the Performance Assessment Coordinator to develop the TIMSS performance assessment. The Quality Assurance Committee helped to develop the quality assurance program.
